

re-sink[®]
sinkronize yourself

A close-up, artistic photograph of a white ceramic toilet. The image is dominated by the smooth, curved surfaces of the toilet seat and bowl, which are set against a stark, solid black background. The lighting is soft and directional, highlighting the contours and creating subtle gradients of light and shadow on the porcelain. The overall aesthetic is clean, minimalist, and modern.

The bathroom experience redefined.

Product Information

The original Re-sink designs redefine the bathroom experience becoming a light fixture. With their organic shapes, LED lighting and versatility in color, they set a new standard in lavatory design.

The Ice finish can change colors using RGB LED lighting to cover the full spectrum. Colors can be set to remain on any combination of red, green, and blue; can be dimmed, or change on rotation or on demand.

Re-sink is proudly made in Italy using a non-industrial process. Each mold is hand filled and discharged, ensuring that every sink, although quite sleek, has slight differences and variations in transparency. This gives each re-sink its own identity.

Sustainability

The manufacturer certifies that the material used for the fabrication of Re-sink products is liquid at birth and is applied as a poured substance. Once the material solidifies by catalysis, it does not emit any gas, since it remains inert. The substance is fire proof (non-flammable), and can be grinded and completely recycled.

Product Line

Amore - available now

Bacio - coming soon

Cuore - coming soon

Goccia - coming soon

Amore

Basic colors available for Amore Re-sink.

Red + White LED

Orange + White LED

Yellow + White LED

Green + White LED

Blue + White LED

Ice + RGB LED

* Any Pantone color can be matched at no extra charge.

* For the Ice finish, any color can be obtained setting the RGB LED Light.

LED Lighting

Re-sink is lit from within its cavity, hiding all electrical connections from sight. It utilizes UL Listed LED or RGB LED strips which are provided and easy to install. The lights can be plugged-in using a conventional outlet or can be hardwired and connected to a home system.

About Us

Re-sink is born from the collaboration of architect Bruno Bondanelli and the dynamic team of Pericle Moretti and Giovanni Cucciardi, whose combined expertise has led to innovative techniques for the creation of the molds as well as the formulas utilized to create a clean, eco-friendly resin.

Bruno Bondanelli is a LEED certified architect in Los Angeles, while Pericle and Giovanni operate in the heart of Umbria, Italy coming from the traditional and artistic craft of terracotta and ceramic tile manufacturing.

The team is already working on the next Re-sink shape and other designs to take us beyond the bathroom.

Care Instructions

You should have the same care for your Re-sink as you would for marble. Avoid alkaline products such as ammonia or caustic soda, and descaling products which could dull the surface.

To clean your Re-sink after each use, simply wipe with a soft cloth. To clean it after extended usage, use water and liquid detergent, wipe with a soft cloth.

For particularly heavy calcium deposit stains, white vinegar dissolved in hot water or professional products for calcium deposit can be employed, you must make sure the sink is rinsed with water and wiped with a soft cloth after using any of these products.

Do not use powder detergents, nor abrasive sponges, which could scratch the surface of the sink. In case of a clogged drain pipe, use a funnel to pour the drain cleaner (declogger), to avoid contact with the resin surface.
